Informatica (L) - Titolo delle relazioni finali a.a. 2019/20 (F008)
A tool for optimizing anonymization algorithm using utility requirements extracted from a set of queries
Automation of retest decision making process
Design and implementation of scalable cloud-based architecture for remote observation at the European Southern Observatory in La Silla. The case of SOXS spectrograph
Compositional models and games
Kinship verification study: study of supervised algorithm for the kinship verification, starting from images
LocalDropout
Improved-ENAS
Stereo Event-Based Matching using Stereo PatchMatch with Slanted Support Window, and Time Surfaces
Extraction of knowledge from RDF graph
Agent-Based Modeling for Studying the Spontaneous Emergence of Money
A symptoms prediction based framework for supporting medical assistance
Image and Text fusion for UPMC Food-101 using BERT and CNNs
Optimal Replication Strategy in Highly Distributed Data Management Systems
Analyzing the Performance of Concentration Indices in the Building of Decision Trees and Random Forests
Confine di decisione dinamico per la classificazione one-class, utilizzando Minimum Spanning Tree
Deep Learning per Customer Experience Analytics
Anomaly detection in real time system
Applicazione di Technologie IoT al Settore Industriale
Progettazione e sviluppo di applicazioni legate all'attività di ingegneria di sistema di strumentazione astronomica con SysML
Studio di un modello multimodale per la classificazione di un testo e la generazione di immagini
Robustezza e resilienza organizzativa: la risposta di AREU alla pandemia Covid-19
Integration of instrument simulators and data reduction pipelines: the case of VLT-ESPRESSO High Resolution Spectrograph
Progettazione e sviluppo di una real time location system in ambito industriale
