

Informatica (LM18) - Titolo delle relazioni finali a.a. 2022/23 (F008)
Cultivated field detection and segmentation on Sentinel-2 satellite multispectral images
Analysis of the YOLO deep neural network for food recognition from digital images
A software for quantifiers in Fuzzy Relational Concept Analysis
Efficient Signatures for Off-Chain Applications: Implementation and Experimental Results
CRAMP - Convolutional Ransomware Analysis with Markov chains of API Patterns.
Working on bankrupt and investments data obtained through documents analysis with the application of Machine learning and Deep learning algorithms to make economics predictions
Sviluppo di una logica per confrontare valutazioni ottenute da operatori del settore del turismo.
Cyber Threat Intelligence: raccolta di informazioni di intelligence per l'identificazione e la prevenzione di minacce
Progettazione e implementazione di un modello Zero Trust adattativo
Design and Development of an EVM Based Block Explorer
Decision Diagram Builder: Design and Development of a Java Application for Representation of Different Logics and Decision Diagram Adaption
Food World, NER of recipe entities and nutritional estimation for semantic search and food plan design
