Agli Allievi del Corso di Dottorato in Fisica & Astrofisica

AVVISO DI SEMINARIO

Il giorno 16 Maggio, alle ore 14:30 (aula ancora da confermarsi), la dr.ssa Elena Popova del Moscow Engineering Physics Institute (MEPHY), terrà un seminario dal titolo

SiPMs activity at MEPHI

The National Research Nuclear University MEPhI (Moscow Engineering Physics Institute) has been established in 1942 during the Second World War for preparation of weapon engineers. Since then, MEPHI was strongly involved in nuclear researches for civil and military applications. At the time being MEPHI is the one of the largest and well known Universities of Russia.

Traditionally High Energy Physics is a strong branch of MEPHI activity. A lot of different detectors have been developed for domestic and international experiments.

Silicon Photomultiplier (SiPM) is the one from such examples. Since 1992 in MEPHI have been carried out researches connected with development of SiPM under supervision of professor Boris Dolgoshein (1930-2010), one of the inventors of SiPM.

During the seminar the main projects and developments of the MEPHY SiPM laboratory, established in 2013, will be presented.

Gli Allievi, Ricercatori e Professori del Dipartimento di Scienza ed Alta Tecnologia sono cordialmente invitati.

Cordiali saluti,

Massimo Caccia
Coordinator of the graduate school in Physics & Astrophysics
Dipartimento di Scienza ed Alta Tecnologia
