#### ***Coordination of CRAIIM Research Activities***

In the role of Scientific Director of the Center of Research in Image Analysis and Medical Informatics she pursues the main objective of promoting interdisciplinary researches at the intersection of computerscience and biomedical field.

She is continuously engaged in promoting exchange of ideas and collaborations between fellow researchers from the center. The continuous increase of Computer Science applications in the medical field creates the need for advanced Data Analysis, Image Processing and Pattern Recognition techniques. In many cases these techniques go beyond conventional approaches and are rooted in advanced computational models that still

require experimental consolidations. In order to convincingly prove the benefits of new techniques to medicals, it is necessary to integrate them in traditional clinical practices and to develop a reliable, intensive method of validation.
